(54) Title: METHOD AND APPARATUS FOR WIRELESS NETWORK EXPANSION

(57) Abstract: The present invention relates to the field of wireless networks. In one form the invention relates to the management of a wireless network and the mobile network devices therein. The present invention stems from the realization that providing information in relation to the accessibility of timeslots and allocating use of "free" timeslots to devices in a network by providing this information as part of the network infrastructure, the restrictions of fixed numbers of devices gaining access to a network and its resources may be overcome.
